

UBUNTU SERVER BOOT PROCESS FLOWCHART

ITEP 414 – System Administration and Maintenance | Week 3
Bachelor of Science in Information Technology (BSIT)
Prepared by: Ralph Rio H. Bautista

Boot sequence: Power On → BIOS/UEFI → Boot Device → GRUB → Linux Kernel → systemd → Services → Login.

Stage Explanations

1. Power On: The physical or virtual machine starts.
2. BIOS / UEFI Initialization: Firmware initializes hardware and selects a boot target.
3. Boot Device Detection: Firmware identifies the device containing the operating-system boot files.
4. Boot Loader (GRUB): GRUB loads the selected Linux kernel and boot parameters.
5. Linux Kernel: The kernel initializes hardware and core operating-system functions.
6. init / systemd: systemd initializes userspace and manages services.

7. Services Start: Networking, logging, SSH, and other configured services start.
8. Login Prompt: The server becomes ready for administrator authentication.
